

CCNA CHEAT SHEET

CLI shortcuts #3

Quickly reset interfaces

```
Router>en
Router#conf t
Router(config)# default interface g0/0/0
Building configuration...
Interface GigabitEthernet0/0/0 set to default configuration
Router(config)#
-----

Switch>en
Switch#conf t
Switch(config)# default interface range f0/1 - 24
Interface FastEthernet0/1 set to default configuration
Interface FastEthernet0/2 set to default configuration
--- [Output Omitted] ---
Interface FastEthernet0/24 set to default configuration
```

Note

Some commands are not impacted by the default interface command.

E.G - A routers interface is Administratively Down by default. If "no shutdown" has been issued on the interface you are defaulting. This state will persist.

To be safe always double check the running configuration after
