CCNA CHEAT SHEET

TCP Vs UDP

TCP is like recorded delivery

This needs to be signed for, and is covered by an insurance policy.
If you don't receive the parcel. You can request a new copy of the parcel to be sent. As there is no record that you have received it.

UDP is like junk mail (flyers)

These flyers may or may not be shoved through your door. Typically posted at speed to get the job done quickly. There is no requirement for redelivery if you don't receive it. It shouldn't impact your day to much if you don't get it.
